Damage to spinal cord and peripheral nerve tissue can have a devastating impact on the quality of life for individuals suffering from nerve injuries. Our research is focused on analyzing and designing biomaterials that can interface with neurons and specifically stimulate and guide nerves to regenerate. These biomaterials might be required for facial and hand reconstruction or in trauma cases, and potentially could be used to aid the regeneration of damaged spinal cord.

Dr. Schmidt is a Fellow of the American Institute for Medical and Biological Engineering (AIMBE), the American Association for the Advancement of Science (AAAS), the Biomedical Engineering Society (BMES), and a Fellow of Biomaterials Science and Engineering (FBSE) of the International Union of Societies of Biomaterials Science and Engineering. She is currently the President–Elect for AIMBE.
